

Conducting Community-based Research on SRHR Target Population

15 Population-based studies have been undertaken

36+ Months long data collection

AdSEARCH's population-based studies aim to provide an in-depth understanding of SRHR needs, care-seeking practices, and programme coverage through diverse study types over 30-36 months at four sites, collecting evidence on burden and risk factors.

Adolescents and young people

Women in the RMG sector

Key Populations

Newly-married couples

Pregnant women

Tracking, Assessing and Evaluating Facility-based SRHR Services

10 Facility based studies have been undertaken

250+ Health facilities covering 40 districts

AdSEARCH is conducting facility-based studies to assess challenges and opportunities in SRHR services, using national surveys and regular assessments of availability, readiness, utilisation, and quality of care.

Adolescent Friendly Health Services (AFHS)

Midwifery-led Care Services (MLCS)

Cervical cancer screening

Sexually Transmitted Diseases (STI) health services

Menstrual Regulation and Post Abortion Care services (MR/PAC)

Maternal and Perinatal Death Surveillance, and Response (MPDSR)

Key Population-friendly services

Infertility services
